

## Observations of exoplanets with the JWST in the framework of Guaranteed Time Observations (GTO)

Pierre-Olivier Lagage

The James Webb Space Telescope (JWST) will provide transformational science in many astrophysical fields. In the exoplanet field, the JWST will make the field fully moving from the detection of exoplanets to the characterisation of their atmosphere. I will illustrate the potential of JWST for exoplanet studies by showing the programs to be conducted in the framework of Guaranteed Time Observations.
