

S17 Activities around the JWST - Extragalactic Deep Legacy Fields

Title of contribution: The JADES (NIRSpec + NIRCам) GTO program

Author: Stephane Charlot (on behalf of the NIRSpec Instrument Science Team and the JADES collaboration)

I will present the JWST Advanced Deep Extragalactic Survey (JADES), a joint program of the JWST/NIRCам and NIRSpec Guaranteed-Time-Observations (GTO) teams involving about 900 hours of observation. The science goal of JADES is to chart galaxy evolution from $z \sim 2$ to $z > 12$ through the study of two well-studied fields with extensive supporting data, GOODS-North and South, including the Ultra-Deep Field.
